Full Stack
Developer

PORT - FOLIO

SAYAGH
Mohamed Amine

01

PROFILE & ABOUT

Full Stack Web Developer.

HELLO I'm Mohamed Amine SAYAGH, Driven by a passion for software engineering, I dedicate myself to creating web interfaces, specifically designed for branding identities. My aim is to merge functionality with high-level aesthetics.

Starting my career with a burst of entrepreneurial spirit, I was brimming with ideas and quickly realized the necessity of materializing these concepts through web interfaces. This led me to delve into the world of design. The transition from design to code was a natural necessary progression, as I aimed to bring my visual concepts to life.

LONG
STORY
SHORT

Despite not having formal qualifications initially, I pursued academic training in informatics, equipping myself with the necessary technical skills and knowledge.

Currently, I am a **Seasoned full stack web developer**, enhanced by extensive international six years of freelancing experience. My skills have been honed under the guidance of an experienced senior developer, contributing to a well-rounded professional profile. Academically, I am advancing towards a master's degree in Big Data & Cloud Computing, which complements my practical experience and broadens my expertise in the field.

Looking ahead, I aim to expand my skill set across various stages of the project life cycle, particularly in developing start-up projects with diverse requirements and high adaptability. My focus is on mastering the transformation of ideas into successful projects, aiming to solidify my position as a Full Stack Web Developer.

WHAT
I DO

FOCUS IN MISSION I Create

progress by designing and developing digital experiences. I shape your business idea into a product that is able to achieve defined goals.

Innovative Exploration

I activate the narrative of your digital brand. Through bespoke digital design, I collaborate with you to craft experiences that resonate authentically with your users, establishing a robust user-product relationship that is enduring and fruitful.

User-Centered Design

You speak, I translate – into design. My process is deeply rooted in understanding your vision, ensuring that every pixel and code reflects your needs. I don't just create; I tailor an experience, making sure that your brand's voice is heard loud and clear in every interaction.

Technical Precision

Precision is my guiding principle. I meticulously construct every line of code and design element with accuracy and intent. My goal is to deliver a product that not only meets but exceeds expectations, ensuring a flawless user journey from start to finish.

Dynamic Collaboration

I adapt, I adjust, I evolve. Collaboration is key to our mutual success. As your brand grows and shifts, I'm right there with you, making real-time changes that are as dynamic as the market. I'm your partner in progress, evolving solutions that thrive.

Stages.

Creative Strategy

I translate your requirements into a tangible strategy, ensuring that the approach is not only viable but also visionary. This stage sets the foundation for a design that's not just effective but also exclusive to your brand.

Agile Development

Here's where ideas are coded into reality. Adopting an agile methodology, I work in sprints to develop the product, allowing for flexibility and iterative improvements. Regular check-ins with you ensure that the project is progressing in line with your expectations and is adaptable to new insights.

Launch and Optimization

The launch marks just the beginning of the product's journey. Post-launch, I focus on optimizing performance, monitoring user interactions, and making necessary enhancements. The product is refined continually to keep pace with user feedback and technological advancements.

Understanding Requirements

The initial step is where clarity meets concept. I initiate every project by immersing myself in your business needs and project specifics. It's about asking the right questions and listening to the story you want to tell through your digital presence.

Interactive Prototyping

With strategy in hand, I proceed to prototyping. This is a collaborative and dynamic stage where you start to see and feel the interaction with your product. Through iterative feedback and continuous refinement, the prototype evolves into a blueprint for the final product.

Rigorous Testing

Before a product goes live, it undergoes comprehensive testing. This stage is crucial to ensure that the user experience is smooth and the interface is bug-free. Multiple testing scenarios and quality checks are conducted to guarantee a seamless launch.

Continuous Support

I believe in building relationships, not just software. Post-deployment, I remain on standby to provide ongoing support, ensuring the longevity and relevance of your digital product. As your business evolves, so will your software, adapting to new challenges and opportunities.

03

CASES
STUDIES

DIGITAL CRAFTSMANSHIP Four years of innovation, captured. This chapter delves into a curated collection of projects that have marked my journey as a web developer. Each project is a testament to a unique challenge met with creativity and technical prowess. Here, you'll find the stories behind the websites, the apps, and the systems that have not only served clients but also pushed the boundaries of what's possible in digital spaces – a vivid reflection of dedication, learning, and success.

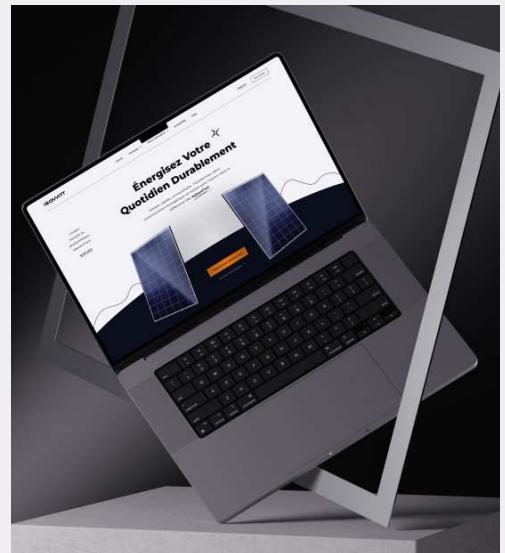

Experiences

Highlights from 6 Years of Experience

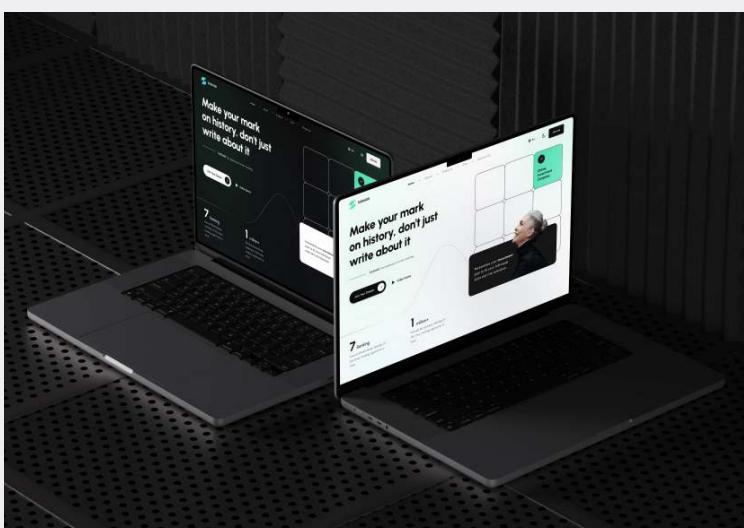

CYBER COHESION

International Security Community

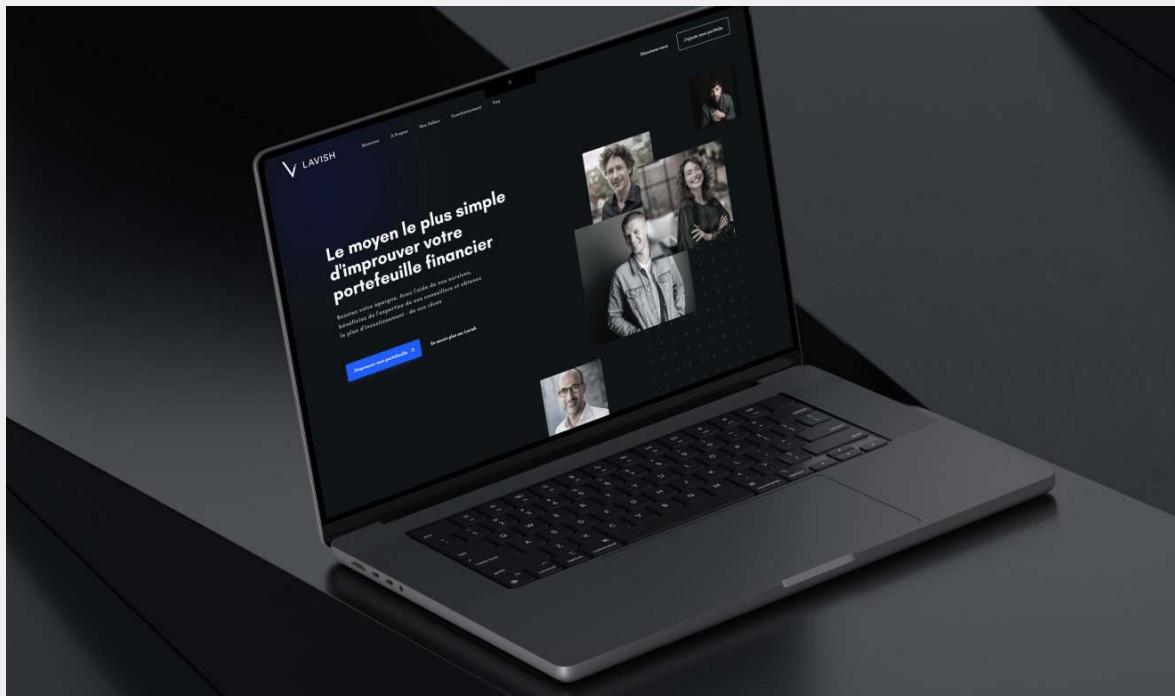

JONAS AGENCY

Marketing Agency For
The Solar Energy Sector

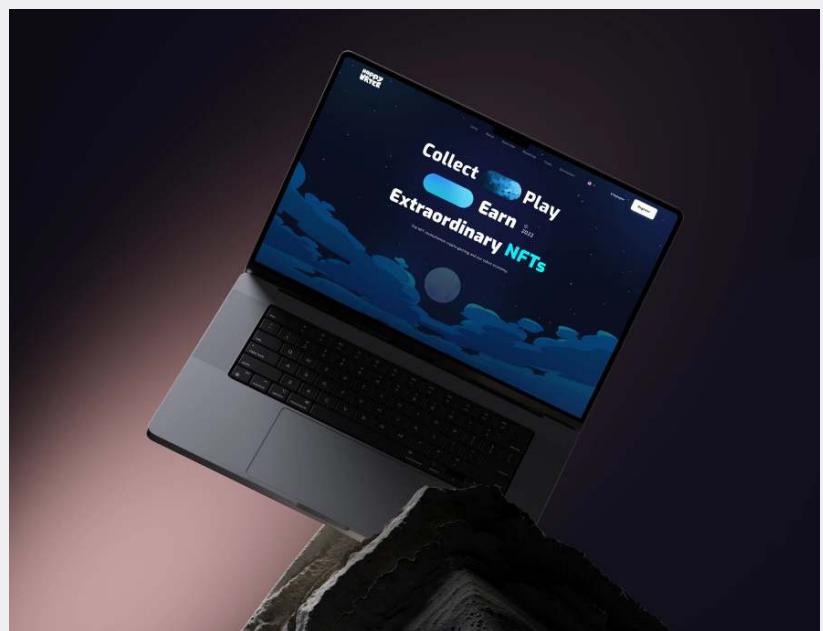

SODIADD

cybercohesions.com/

My Role And Responsibilities

Began as a Research & Development Engineer, consulting on database serving patterns and search indexing implementations.

Transitioned to a Web Developer role, focusing on developing front-end solutions for project needs.

Promoted to Tech Lead Developer, managed a team of 6, guiding the project to meet high web security and performance standards without external solutions.

Technologies Used

Core Languages:

JavaScript, TypeScript, PHP

Web Development:

RESTful API, Docker, CI/CD Pipeline

Database Management:

NoSQL, with enhancements in schema optimization and indexation

Methodologies:

Agile for project management and development

Challenges And Solutions

CHALLENGE 1:

Security requirements prohibited the use of external libraries or frameworks, necessitating the development of in-house solutions for web development needs.

Undertook extensive research and reverse engineering of existing web solutions, such as Zod for data parsing and the templating standards of WordPress and React. This process enabled the creation of a dynamic front-end template system, simplifying development for our team.

Challenges And Solutions

CHALLENGE 2:

The necessity to manage style and JavaScript utility separately while ensuring efficient development processes within our team.

Developed an in-house web component library that effectively separated style and JavaScript utility. This approach facilitated the creation of a template as an abstraction layer, aligning with the development team's needs and enhancing overall project maintainability and security.

CHALLENGE 3:

As the project complexity increased, effective task delegation and process optimization became crucial to meet stringent security requirements and project deadlines efficiently.

Improved the project's workflow by implementing a structured task delegation system, which allowed for clearer responsibilities and better use of the team's diverse skill sets. Regularly reviewed and refined development processes, leading to increased productivity and meeting project milestones ahead of schedule.

Outcome And Impact

Successfully enhanced the modularity and maintainability of our web solution by abstracting framework components, allowing for seamless addition of new features. Team members could integrate new functionalities without direct involvement with underlying JavaScript or CSS, streamlining development workflows. All updates adhered to a well-defined CI/CD pipeline, ensuring consistent, error-free deployments and continuous integration.

Skills Acquired Or Enhanced

Advanced my expertise in full-stack web development, focusing on security and performance optimization.

Gained substantial experience in leading a tech team under demanding conditions, enhancing my leadership and project management skills.

JONAS DIGITAL AGENCY

Specialized marketing agency for the solar energy sector

07/2024 - 03/2024

OBJECTIVE As a Full Stack Web Developer, contributed to various projects for the solar energy sector, focusing on web development and optimization in alignment with marketing strategies to enhance client engagement and online presence.

Engagement

Localisation

Freelance

London, United Kingdom

My Role And Responsibilities

Worked as a Full Stack Web Developer, engaging closely with the marketing team to design and develop web solutions that effectively targeted potential clients.

Led the technical execution of website migrations, optimizations, and redesigns to improve performance and user experience.

Collaborated with agency clients to refresh their online identity, focusing on creating a more attractive and informative web presence.

Technologies Used

Web Development:

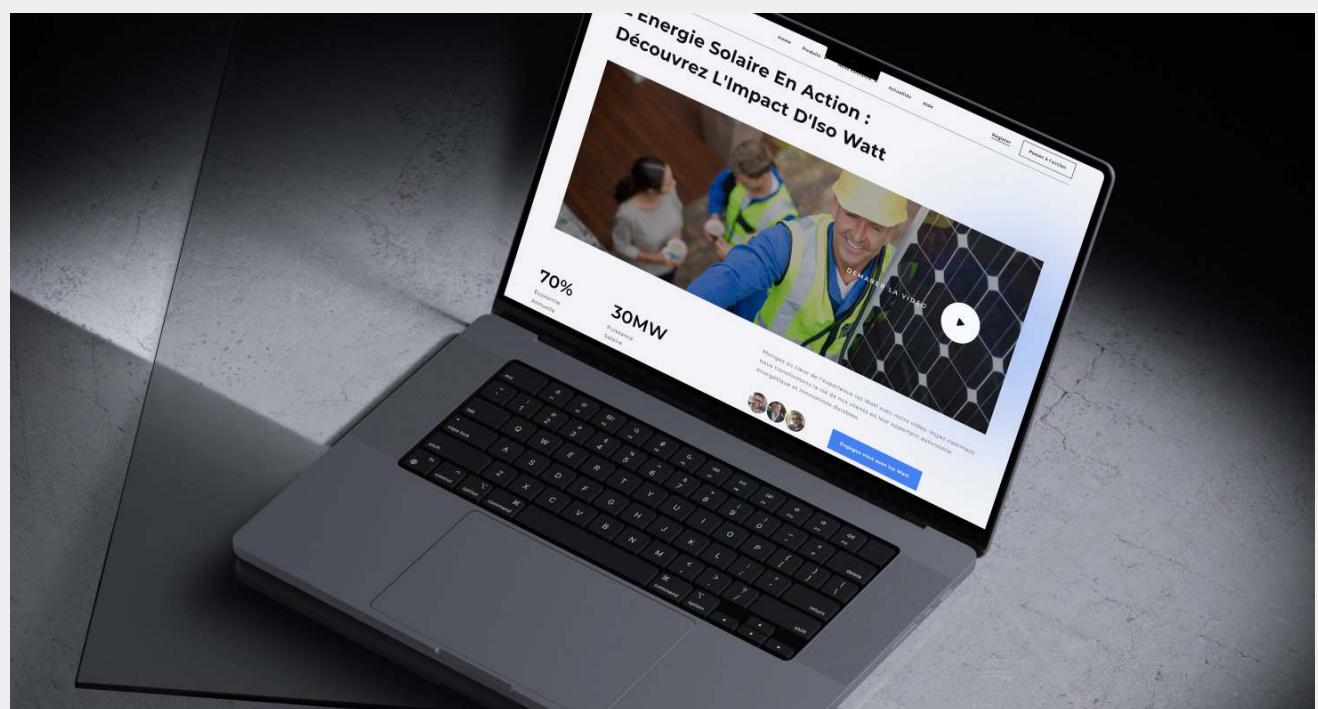

JavaScript, TypeScript, PHP, WordPress

Integration & Optimization:

Webhook, API Integration, resource optimization techniques

Design:

Figma, UI/UX Design principles

Challenges And Solutions

CHALLENGE 1:

Enhancing Coreas's website performance and functionality on a limited hosting environment without migration permission, while integrating new features to meet expanding business needs.

Developed custom, optimized plugins tailored to Coreas's unique requirements, linking major computing and data storage tasks to external APIs through webhooks. This approach maintained performance standards and accommodated new functionalities within the hosting constraints.

Challenges And Solutions

CHALLENGE 2:

Meeting the high demand for website availability and adaptability, particularly optimizing for iPhone devices, which presented significant user experience challenges.

Implemented a dual-content strategy, creating separate versions for mobile and desktop, coupled with extensive resource optimization. Conducted in-depth research on caching mechanisms to enhance website stability and performance across different devices, especially iPhones.

CHALLENGE 3:

Ensuring the maintainability and performance of a 20-section PHP web page, loaded with high-quality images, content variations, and interactive elements like submit forms and multiple CTAs.

Employed advanced optimization techniques and managed a multi-layout cache system to handle the heavy content load efficiently. This approach ensured smooth performance and maintainability, with the site's architecture supporting easy updates and scalability. Successfully addressed performance bottlenecks within the tight deadline, while managing the complex process of generating the web page.

CHALLENGE 4:

Developing a separate, responsive, and feature-rich website for professional use within a very limited timeframe.

Demonstrated exceptional project management and development skills by delivering a fully functional, 8-section landing page in just 13 hours, effectively meeting the urgent demand and showcasing rapid development capabilities.

Outcome And Impact

Successfully launched a new website for Coreas, meeting the marketing team's specifications and client acquisition goals.

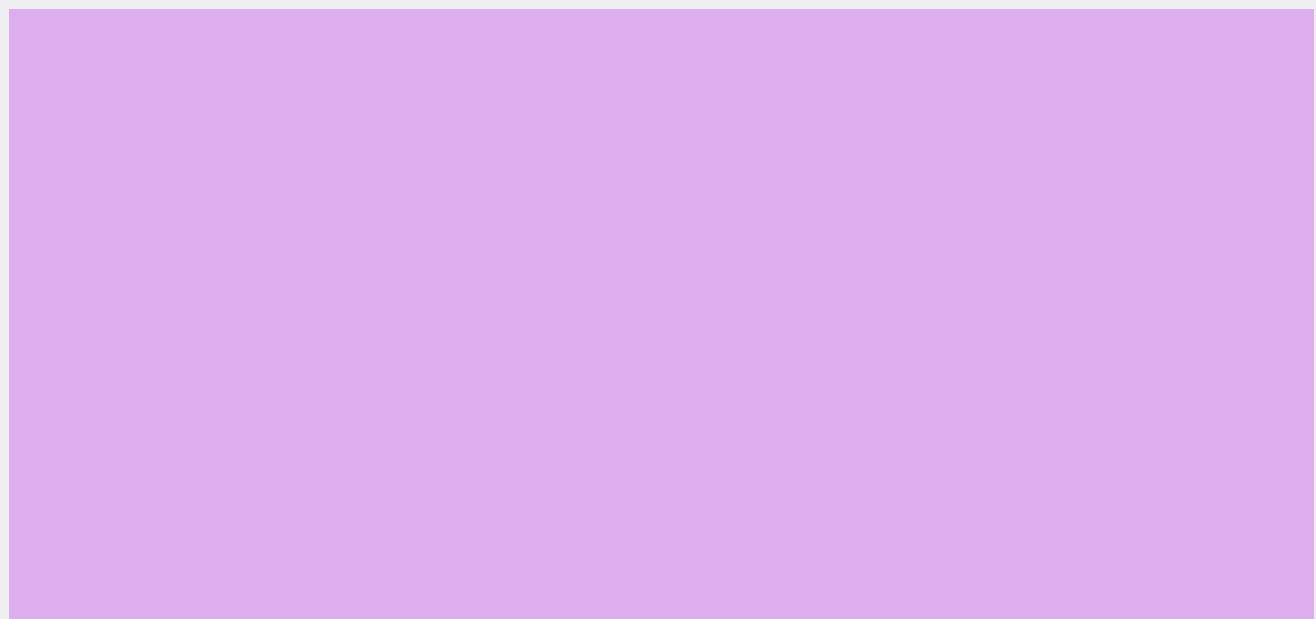

Skills Acquired Or Enhanced

Advanced expertise in full-stack web development, with a focus on performance optimization and maintainability in high-content web environments.

Improved project management and rapid development skills, effectively meeting tight deadlines and diverse project requirements.

Gained a deep understanding of web architecture and WordPress process development, enhancing my ability to tailor solutions to complex project requirements.

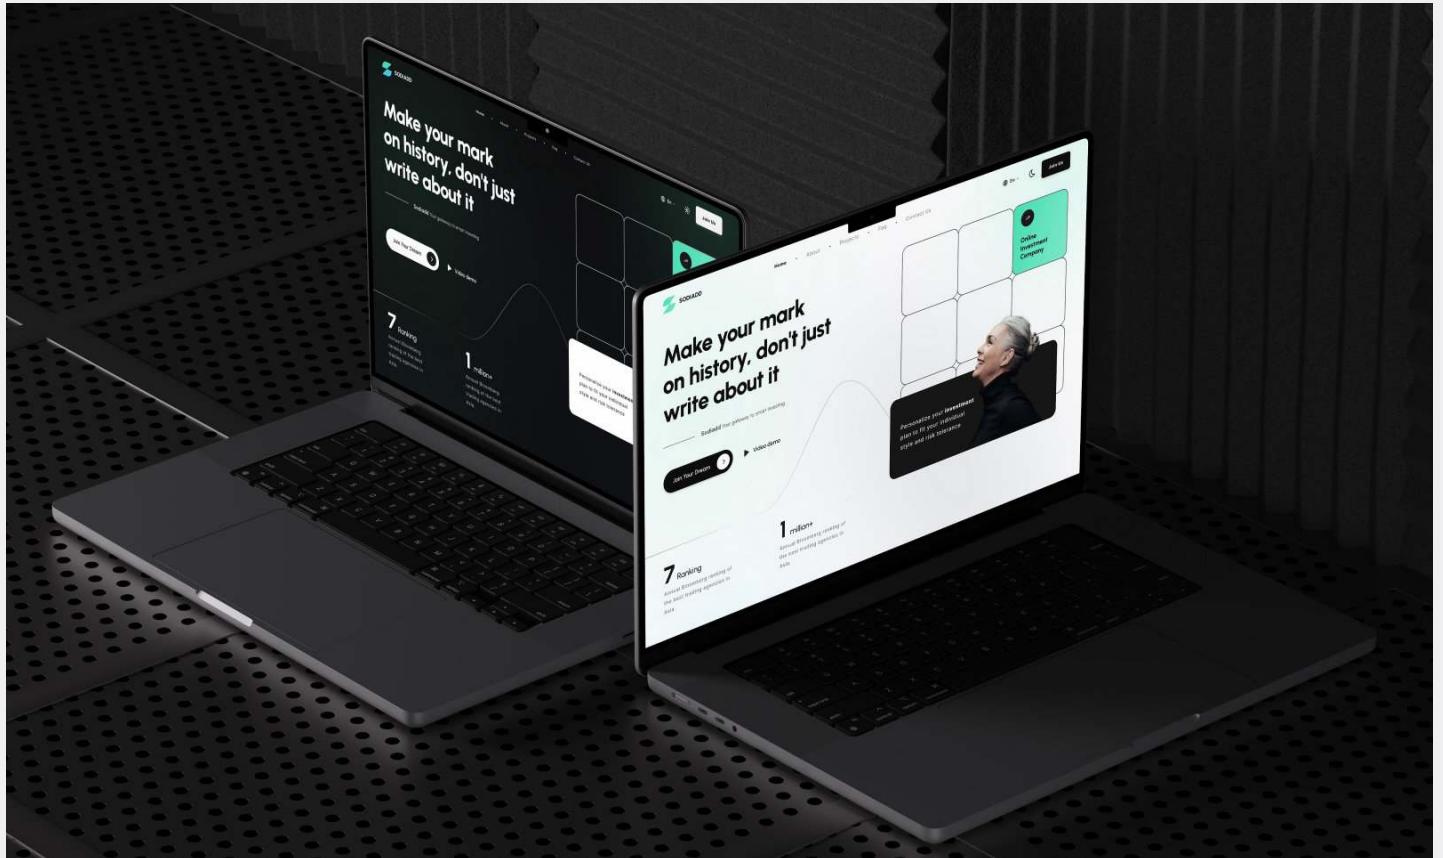

Enhanced UI/UX design abilities, creating more engaging and user-friendly web interfaces.

SODIADD

Real Estate Investment Firm

03/2023 - 06/2023

OBJECTIVE Developed a comprehensive web platform for real estate investment, focusing on a monolithic architecture to streamline operations and enhance user experience for individual investors.

Engagement

Localisation

Freelance

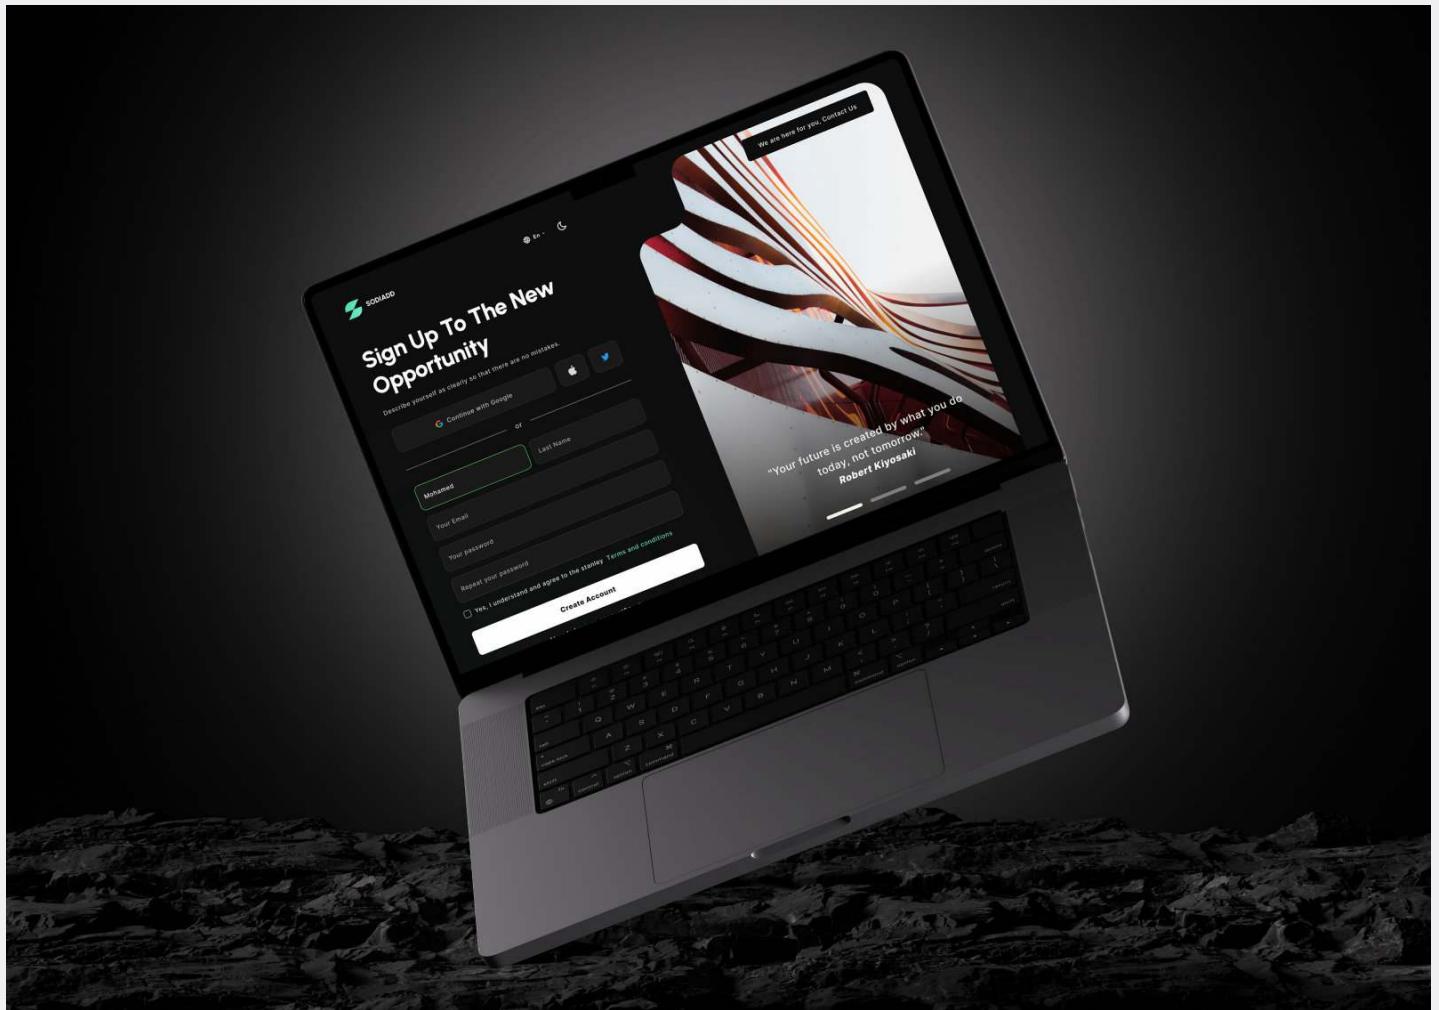

France

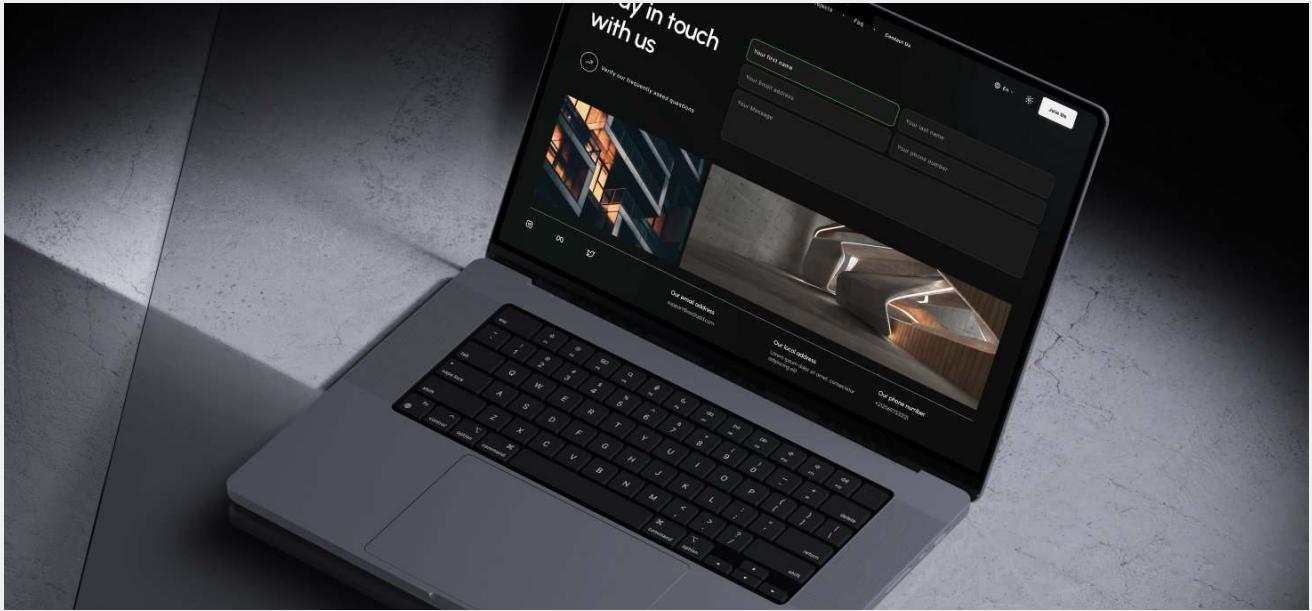

My Role And Responsibilities

Developed and managed a web platform with a monolithic architecture, integrating 11 libraries and 5 applications to support the real estate investment process.

Took charge of the full-stack development process, from database management to front-end design and deployment.

Designed the branding identity, establishing UI patterns and responsive design standards to reflect the unique brand of the company.

Technologies Used

Backend:

Express, MongoDB for database management

Design:

Figma for UI/UX design

Frontend:

Next Turbo, Storybook for UI component development

Integration & Deployment:

CI/CD pipeline for streamlined deployment and testing practices

Challenges And Solutions

CHALLENGE 1:

Deploying a scalable and secure database solution tailored to the specific requirements of real estate projects.

Successfully deployed a MongoDB database on a cloud service, optimizing it for the high-demand and specific needs of the real estate sector.

Challenges And Solutions

CHALLENGE 2:

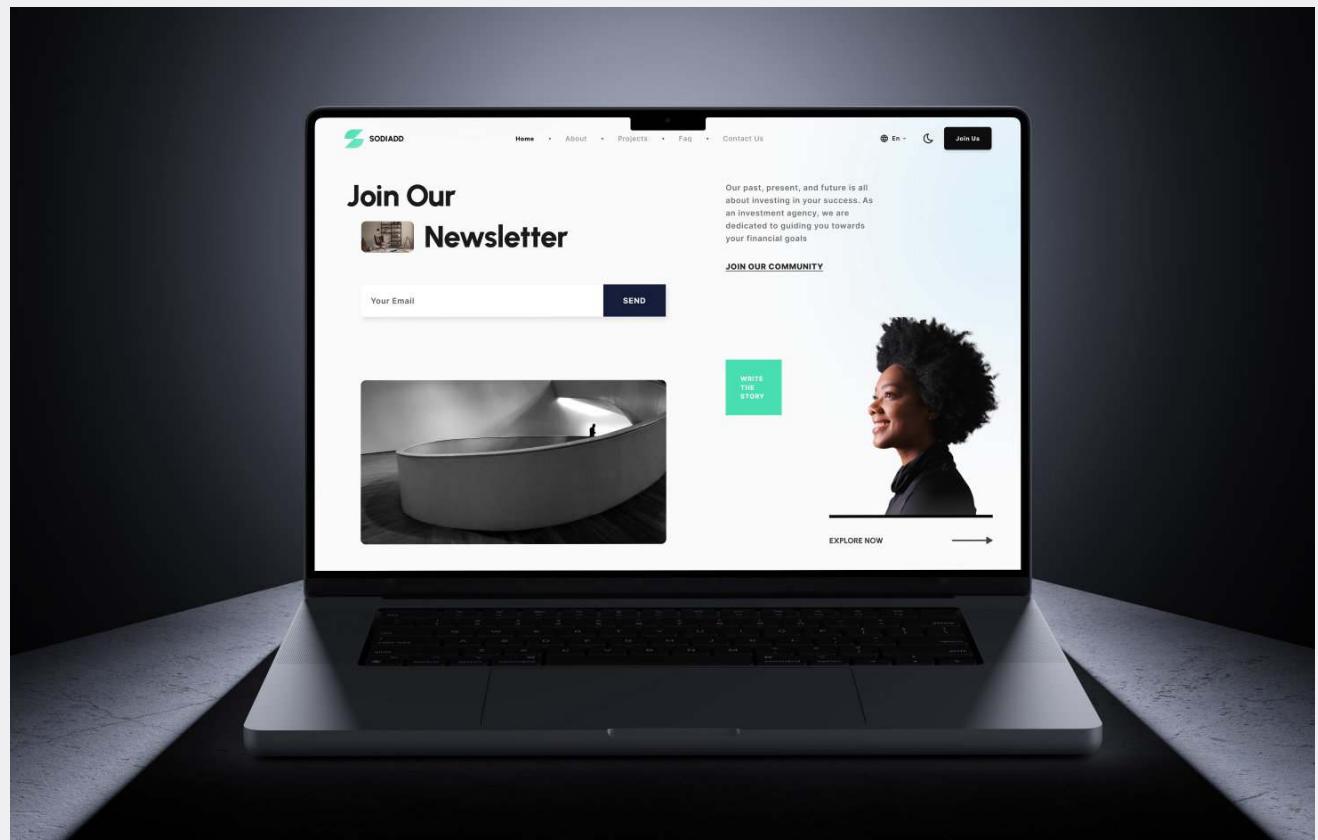

Required to build a robust web platform that could efficiently handle the complex needs of real estate investment, incorporating multiple libraries and applications into a cohesive system.

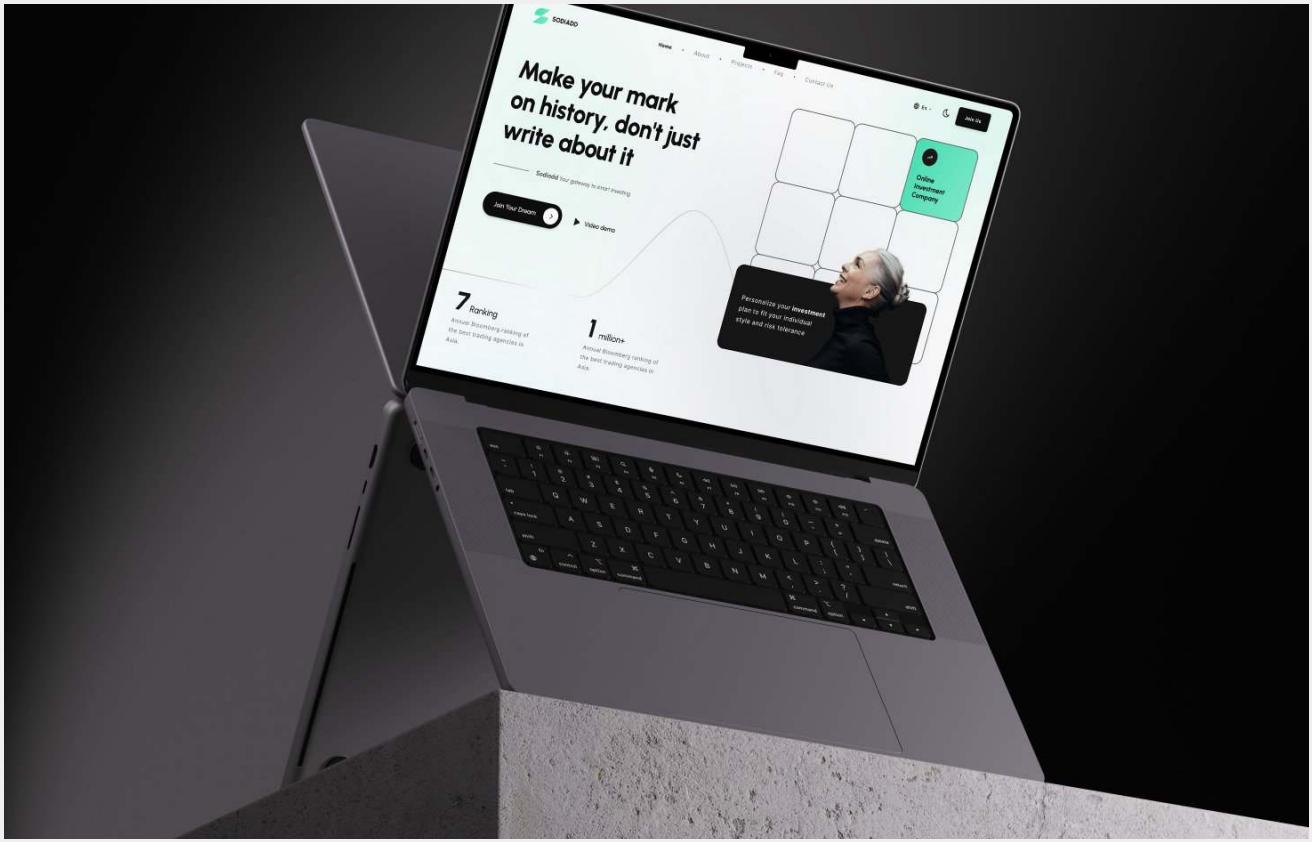

Developed a monolithic architecture that seamlessly integrated 11 libraries and 5 applications, enhancing system coherence and operational efficiency.

CHALLENGE 3:

Creating a unique branding identity and responsive design that accurately represents the client's vision and appeals to individual investors.

Designed the branding identity from scratch, including UI pattern roles and web component elements, using Figma to create a responsive and visually appealing design that resonated with the target audience.

Skills Acquired Or Enhanced

Deepened understanding of monolithic architecture and its implementation in web platform development.

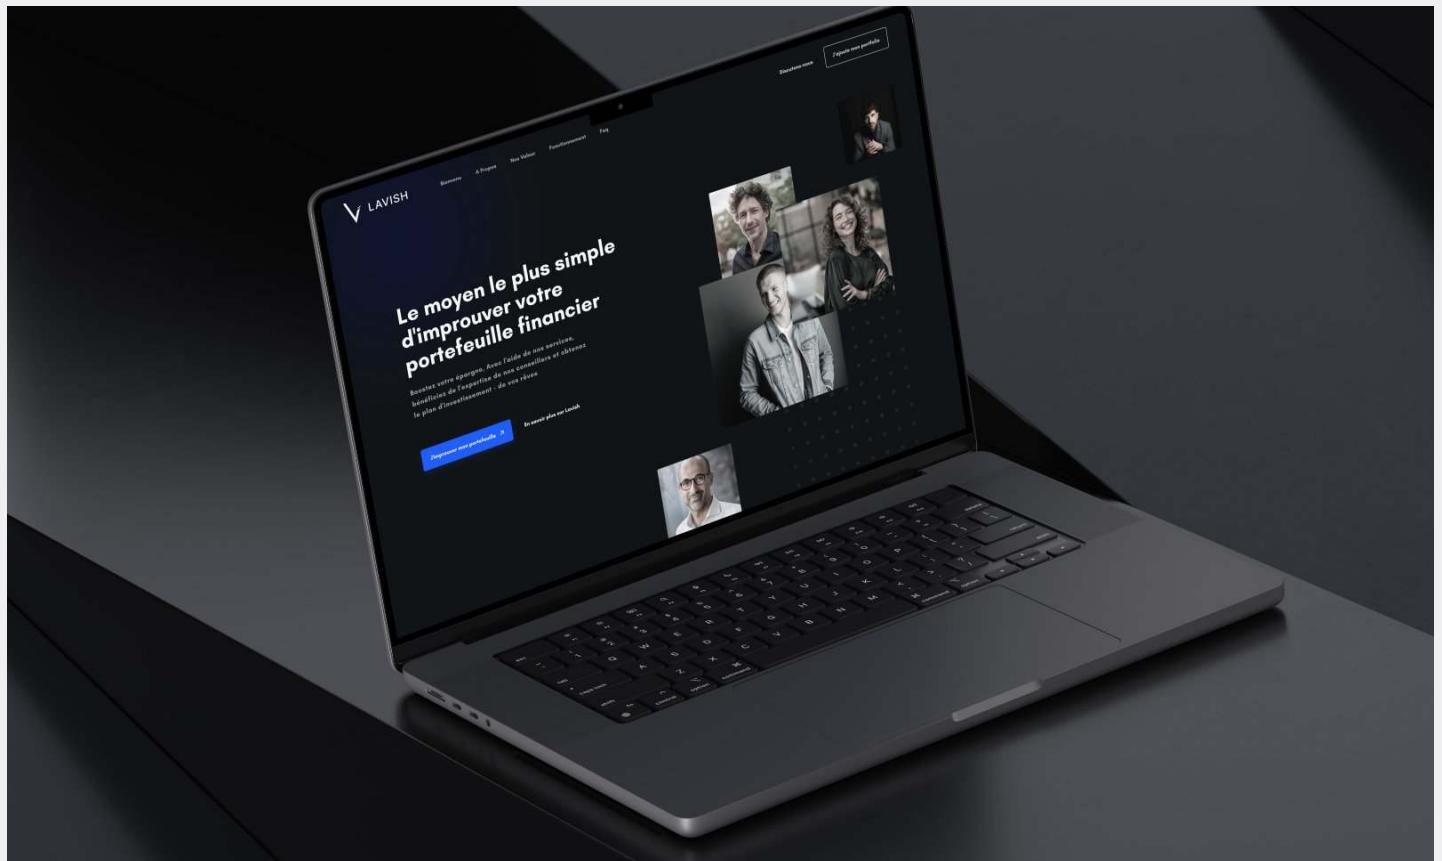

Advanced skills in database deployment and management, specifically with MongoDB Atlas on cloud services.

Refined UI/UX design skills, particularly in creating unique branding identities and responsive designs for niche markets.

LAVISH TRADING

Real Estate Investment Firm

03/2023 - 06/2023

OBJECTIVE As a Front End Web Developer, developed a high-performance website for a trading agency, focusing on delivering top-tier design and functionality to cater to individual clients.

Engagment

Localisation

Freelance

London

Quick Links

lavish.masayagh.com/

My Role And Responsibilities

Responsible for creating a visually appealing and high-performance website using modern web development frameworks.

Collaborated with the marketing team to design a landing page that adheres to high design standards, incorporating chart graphics and unique stylistic features.

Technologies Used

Web Development:

Express, MongoDB for database management

Tools:

Figma for UI/UX design

Styling:

Next Turbo, Storybook for UI component development

Deployment:

Vercel for hosting and deployment

Integration:

API integration for real-time data processing

Challenges And Solutions

CHALLENGE 1:

Developing a website that meets the high aesthetic and performance standards required for a trading agency targeting individual clients.

Utilized React/Next.js and Tailwind CSS to build a fast, responsive website. Implemented advanced animations using Gsap and Framer Motion to enhance the user experience, meeting the client's high design and performance expectations.

Challenges And Solutions

CHALLENGE 2:

Designing a landing page that effectively communicates the trading agency's value proposition, incorporating complex chart graphics and a unique style.

Worked closely with the marketing team to design a landing page in Figma that not only met the high aesthetic standards but also effectively showcased the trading data and analytics, utilizing API integration to display real-time trading information.

Outcome And Impact

Successfully delivered a visually striking and high-performance website, significantly enhancing the online presence and client engagement for Lavish Trading.

The landing page's design and functionality led to an increased user engagement, effectively communicating the agency's services and strengths in the trading sector.

Skills Acquired Or Enhanced

Enhanced expertise in front-end development using React/Next.js and Tailwind CSS, focusing on high-performance and visually appealing designs.

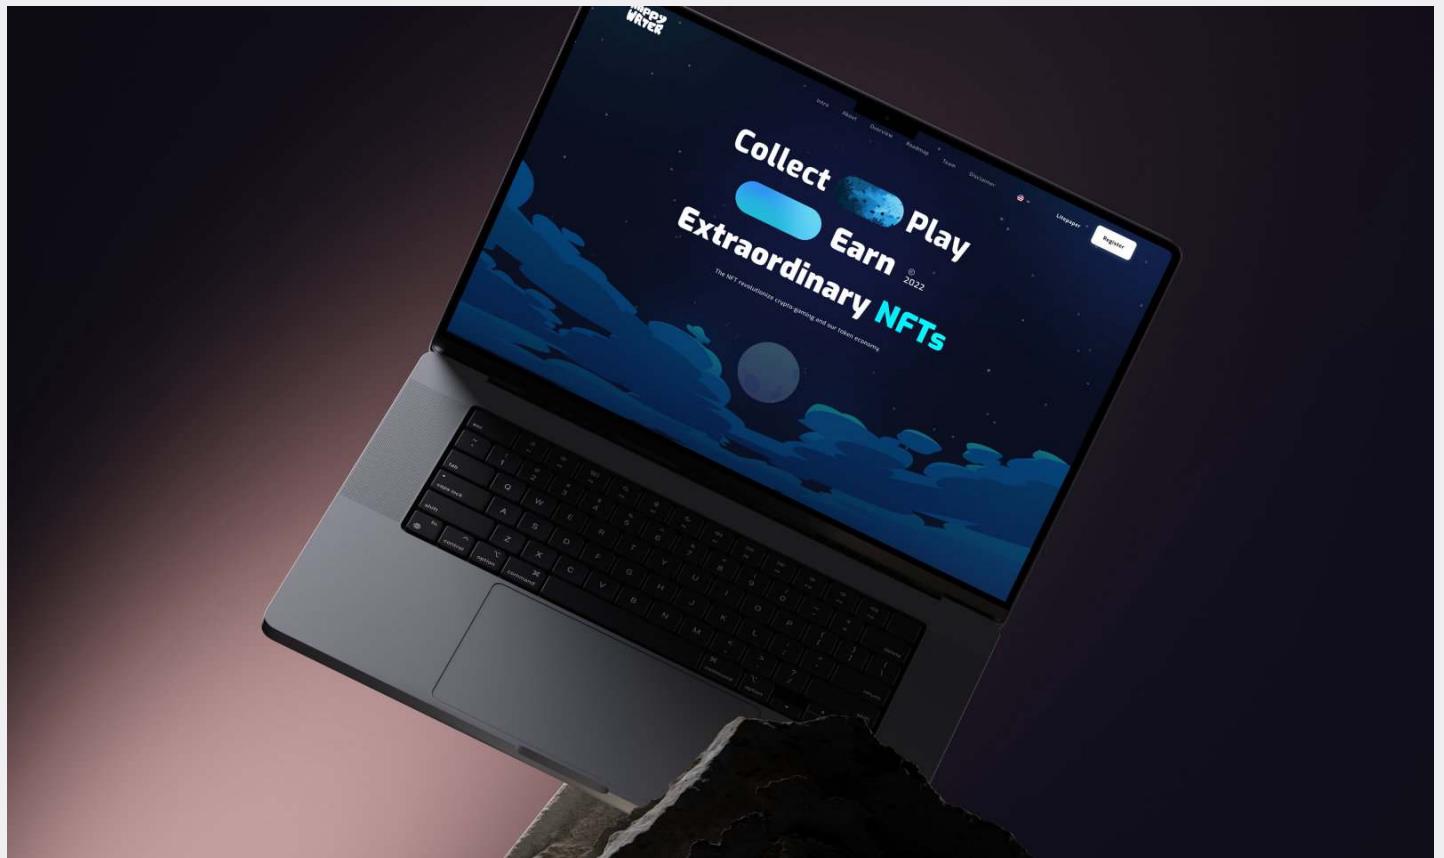

Advanced my skills in integrating complex graphical data into web designs, improving my ability to present information in an engaging and informative way.

Gained further experience in collaborating with marketing teams to align web design with business objectives, enhancing the overall brand strategy.

HAPPY WATER

Real Estate Investment Firm

06/2022 - 08/2022

OBJECTIVE Engaged as a Freelance Full Stack Developer to design and develop a modern landing page for introducing the Happy Water project to the community, with a focus on integrating Web 3.0 technologies for a client-facing site.

Engagement

Localisation

Freelance

France

Quick Links

happy-water.masayagh.com/

My Role And Responsibilities

Led the design and development of a modern landing page to effectively introduce the Happy Water project to the broader community.

Developed the front-end of the client-facing site, implementing modern technologies and maintaining high development standards, with special attention to Web 3.0 integration.

Technologies Used

UI/UX Design:

Figma for interface design, Photoshop for graphic elements

Animation:

Gsap for engaging and interactive animations

Integration:

API integration to enhance functionality and user interaction

Web Development:

React/Next for robust and scalable frontend development

Deployment:

Vercel for hosting and deploying the website

Challenges And Solutions

CHALLENGE 1:

Designing and developing a website for a project with a gaming background, a sector I was not familiar with, which required a deep understanding of the gaming community's mindset and preferences.

Engaged in continuous communication with the client and the marketing team to gain insights into the gaming culture and community expectations. This collaborative approach ensured that the design and functionality of the website accurately reflected the gaming-oriented theme and appealed effectively to its target audience.

CHALLENGE 2:

Developing a front-end that adheres to high development standards while incorporating the necessary Web 3.0 features to enhance user interaction and security.

Employed React/Next to build a high-performance, scalable front-end. Integrated Web 3.0 technologies to ensure cutting-edge user experiences and security measures, aligning with the latest trends in web development.

Outcome And Impact

Successfully launched a modern and interactive landing page for the Happy Water project, significantly boosting community engagement and project visibility.

Delivered a high-standard, Web 3.0 integrated client-facing website that not only met but exceeded client expectations in terms of performance and user experience.

Skills Acquired Or Enhanced

Enhanced skills in UI/UX design, particularly in creating modern web interfaces that align with current web trends and standards.

Advanced knowledge in the integration of Web 3.0 technologies, positioning myself at the forefront of modern web development.

Gained further experience in high-performance web development using React/Next, solidifying my capabilities in building scalable and robust web applications.

04

TECHNOLOGIES

KHNOUWLED KEY As a programmer, not merely a coder, I delve into the foundational needs of each project, crafting solutions that transcend mere functionality to achieve strategic innovation. My programming journey is driven by a relentless pursuit of knowledge, particularly in the nuances of software engineering architecture and decision-making.

This expertise in foundational project requirements is the thread that connects all my technological learning, ensuring that I am exceptionally equipped to kickstart projects with precisely the right tools and strategies for success.

Proven Commitment to Software Development:

Managed 104 GitHub repositories, demonstrating a broad scope of project involvement and continuous code management.

Diverse Project Engagement:

Participated in 26 projects during the last four years, showcasing my versatility and ability to adapt to various technological needs.

Expertise in Key Technologies:

Proficient in PHP and TypeScript, with extensive experience in using these languages to build robust and scalable applications.

Extensive Experience with Client Projects:

Contributed an impressive 5,882 pushes on GitHub over the past four years, reflecting my active engagement and consistent delivery of value to clients.

Significant Code Contributions:

Written and deployed over 476,000 lines of code into production, highlighting my substantial hands-on experience in coding and software architecture.

Design Skills

Academic design Principal, Design thinking process, UI/UX Design

Front-end Frameworks

React/Next.js, Next Turbo, Vue.js/Nuxt.js, Laravel

Front-End Component Libraries

Next Ui, React Spectrum Libraries, Bootstrap

Development Environment

Apache Server, Nginx, Node.js

Database

Relational Db: MySQL, PostgreSQL
Document Db: MongoDB

Testing Practices

Unit Testing (Jest), Functional Testing (Cypress), Regression Testing (Puppeteer), Integration Testing (Supertest, Postman)

Version Control and CI/CD

Git, GitHub, GitHub Action, GitHub Copilot

Artificial Intelligence

ChatGPT-4, Copilot, Midjourney

Methodology and Standards

Agile, SOLID

Design Tooling

Photoshop, Illustrator, Figma

Front-End Libraries

Tailwind, jQuery, Dom, Html Css, SCSS, State Management (Redux, VueX ...), Tanstack library, Storybook, i18n, RxJs

Back-End Framework

Express, Zod, Apollo Server, Serverless functions, Next Auth, Firebase

Programming Languages

PHP, Typescript, SQL, Python

Architecture, Protocols, and Integration

RESTful API, OAuth v2, GraphQL, WebSocket, Webhook

Content Management System

WordPress, PrestaShop, Strapi, Headless CMS, React Gutenberg

Containerization and Orchestration

Docker, Docker Compose

Cloud Services

Cloudflare, Google Cloud, AWS, Oracle Cloud, Github Codespace, Heroku, Vercel

05

EDUCATION
DEGREES

ACADEMIC ACHIEVEMENTS

The significance of a robust foundational knowledge cannot be overstated. As a software engineer, dedicating time to grasp the fundamental concepts such as the theory of languages, operating systems, and algorithm complexity is crucial. These core studies are not merely academic pursuits; they are essential tools that enhance our ability to innovate and solve problems efficiently. My academic journey, enriched by a baccalaureate in mathematical sciences and a specialized license in data science, has been fundamental in building a deep analytical framework that supports all aspects of software development.

Currently, as I advance my studies in a master's program focused on Big Data and Cloud Computing, I am gaining insights that are critical for understanding the scalability needs of future projects and exploring the practical applications of AI in real-world scenarios. This ongoing education not only broadens my technical horizons but also sharpens my strategic vision, ensuring that I am prepared to leverage cutting-edge technologies to their fullest potential.

Master in Big Data and Cloud Computing (In Progress) 

Licence Diploma in Data Science 

Baccalaureate in Mathematical Sciences 

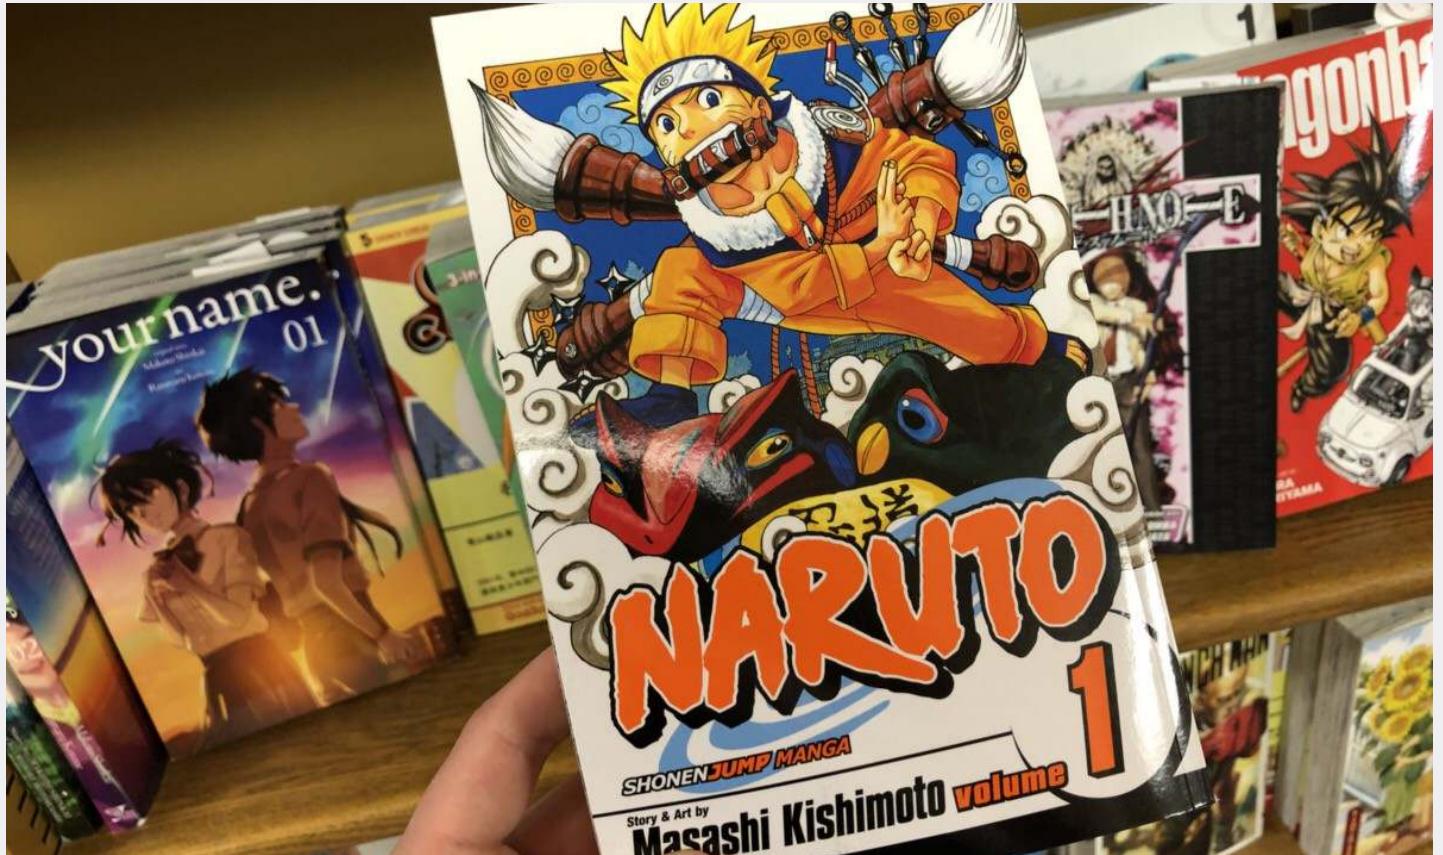

06

CHALLENGES

SHINOBI BOY

Personal Project

05/2022 - 06/2022

OBJECTIVE Developed a comprehensive web solution for manga content delivery, integrating data extraction, AI-optimized imagery, and high-performance web services, before ceasing operations due to ethical considerations.

Engagement

Fonder

My Role And Responsibilities

Extracted and structured data from multiple web sources, ensuring a robust database for manga content.

Created and managed a RESTful API to facilitate fast and reliable access to manga content for users.

Automated various publishing tasks to enhance operational efficiency using backend services.

Developed a custom WordPress theme and conducted extensive research and development to optimize website performance.

Technologies Used

Data Management:

MongoDB for database solutions, MySQL for integration with WordPress.

Frontend Development:

JavaScript and TypeScript for scripting and interface functionality.

Automation and Scripting:

Puppeteer for automating web interactions and scraping tasks.

CI/CD and Version Control:

GitHub Actions for automated testing and deployment, Git for version control, Docker Compose for container management.

Backend Development:

Express framework to create RESTful services.

Image Optimization and Storage:

AI tools for image analysis and CDN for optimized content delivery.

Web Design and Development:

Custom WordPress theme development, utilizing PHP for server-side scripting.

Challenges And Solutions

CHALLENGE 1:

Scraping manga content from non-structured sources.

Developed a scheduled scraping service, parameterized to handle multiple content sources with a similar architectural pattern, allowing for consistent data collection from single archive posts.

CHALLENGE 2:

Managing a centralized database to store and track content and operational states.

Implemented a MongoDB database indexed by a strict schema, including a collection of options for managing business configurations and a logging system to record service errors.

CHALLENGE 3:

Storing large volumes of media content scraped from online sources.

Created a new service to manage the saving of images in a CDN after optimization and AI analysis to filter out inappropriate content, with references to these images stored in the MongoDB database.

CHALLENGE 4:

Optimizing performance and costs with limited cloud resources.

Code optimization and clustering to parallelize data scraping instances, implemented a caching system, and developed a complex mechanism to decide the necessity of scraping new episodes based on recent scrapes and user engagement.

Challenges And Solutions

CHALLENGE 5:

Integrating scraped data into a WordPress website for user access.

Developed an internal WordPress plugin that opens a webhook listener. Upon notification, the PHP code sends a request to the RESTful Node.js API that serves the MongoDB database, retrieves new episode information, saves it in the WordPress MySQL database, notifies the user experience service, and updates the episode status via the REST API.

CHALLENGE 6:

Enhancing user experience on the WordPress platform.

Developed a custom WordPress theme that offers a flexible reading and feedback-sharing experience, tailored to the needs of manga readers.

CHALLENGE 7:

Integrating new features into existing services while ensuring stability and scalability.

Enhanced the development workflow by adopting a robust CI/CD pipeline using GitHub Actions for automated testing and deployment. Utilized version control with Git and GitHub to manage changes and facilitate team collaboration. Deployed services using Docker Compose to manage container orchestration, ensuring consistent environments across development and production stages.

CHALLENGE 8:

Addressing ethical concerns regarding the project.

After consulting with manga business domain experts and reflecting on the broader consequences of the project, I made the difficult but necessary decision to shut down the project to adhere to ethical standards.

PORTFOLIO

Personal Project

07/2023 - 09/2023

OBJECTIVE To develop an award-winning portfolio website that not only showcases high-quality design, SEO, animation, and mobile responsiveness but also serves as an introductory platform presenting my discipline and work style to attract more potential clients and highlight my project capabilities.

My Role And Responsibilities

Designed the user interface, applying high design standards using tools like Figma, Photoshop, and Illustrator.

Developed the front end using Next.js and Tailwind CSS, focusing on responsiveness and interactivity.

Managed content through a headless WordPress backend, linked with a GraphQL server for efficient data handling.

Technologies Used

Design Tools:

Figma, Photoshop, Illustrator

Frontend Development:

Next.js, Tailwind CSS

Backend Services:

Headless WordPress, GraphQL

Challenges And Solutions

CHALLENGE 1:

Balancing high-end design with optimal website performance, especially in SEO and mobile responsiveness.

Applied best practices in web design and development to enhance SEO while integrating sophisticated animations that are optimized for speed and responsiveness on mobile devices.

Challenges And Solutions

CHALLENGE 2:

Managing the site's performance given the initial load of more than 173 images and extensive JavaScript animations, particularly optimizing for mobile devices.

Implemented careful media optimization and restricted component execution to necessary user interactions, leveraging an advanced understanding of the Next.js framework to enhance site performance and user experience on mobile.

CHALLENGE 3:

Creating a visually stunning website that could potentially win design awards.

Creating a visually stunning website that could potentially win design awards.

Skills Acquired Or Enhanced

Advanced expertise in modern web development frameworks and design tools.

Improved strategic content management with headless CMS architectures.

Strengthened abilities in performance optimization for high-load, interactive websites.

Developed a deeper understanding of personal branding and professional presentation, gaining valuable insights into effective communication of my skills and achievements.

Outcome And Impact

Launched a visually impressive and technically robust personal portfolio website that not only showcases my skills but also effectively reaches potential clients and professional mentors.

Generated significant interest from new clients and received offers for professional mentoring, expanding my network and opportunities for future projects.

Engaged in a reflective practice through the creation of my portfolio and the iterative crafting of my resume, guided by technical mentors. This process enhanced my self-awareness, helping me to identify my strengths and weaknesses and making informed decisions about my career trajectory.
